ORGANICS RECOVERY

Recovering resources is a top priority.

Helping customers participate in a circular economy by recovering organic waste into high-performance products.

Leaders in modern composting.

Proudly operating Canada's largest and most successful composting, soil blending and packaging facility.

Committed to a sustainable future.

Our premium products known under our All Treat Farms® and Gro-Bark® brands are driven by environmental sustainability.

Highest level of service every step of the way.

Our clean, organized sites are carefully and scientifically managed to produce consistent, quality products and our sales team is dedicated to building lasting relationships.

Compost

- Contributes to soil health by adding organic matter content.
- Improves water holding capacity helping to reduce stress on plants and crops.
- Sustainably sourced from household food waste, leaf and yard waste, and other organic wastes.

Soils and Amendments

- Plays a key role in sequestering carbon from atmosphere.
- Stimulates microbial activity for healthy soil environment.
- Long lasting affects by reducing compaction, optimizing root growth and moisture retention, and balancing air porosity.

Mulch

- Improves organic matter in underlying soils.
- Greater resiliency of plants and crops in face of extreme climates.

GORE® Cover System

The patented GORE® Cover System is an advanced organics composting system that combines a membrane cover and controlled aeration. This reliable composting process allows Walker to produce the highest quality compost.

Building a sustainable future, **together.**
